

CIKM 2020: The 29th ACM International Conference on Information and Knowledge Management

Event Schedule

Mon, Oct 19, 2020

6:00am

Challenges and Solutions to the Student Dropout Prediction Problem in Online Courses

🕒 6:00am - 9:00am, Oct 19

📍 Limerick

Tutorials

Online education is one of the wealthiest industries in the world. The relevance of this sector has increased due to the COVID-19 emergency, forcing nations to convert their education systems towards online environments quickly. Despite the benefits of distance learning, students enrolled in online degree programs have a higher chance of dropping out than those attending a conventional classroom environment. Being able to detect student withdrawals early is fundamental to build the next generation learning environment. In machine learning, this is known as the student dropout prediction (SDP) problem. In this tutorial, intermediate-level academicians, industry practitioners, and institutional officers will learn existing works and current progress within this particular domain. We provide a mathematical formalisation to the SDP problem, and we discuss in a comprehensive review the most useful aspects to consider for this specific domain: definition of the prediction problem, input modelling, adopted prediction technique, evaluation framework, standard benchmark datasets, and privacy concerns.

Tutors:

Bardh Prenkaj; Giovanni Stilo; Lorenzo Madeddu

IoT Data Quality

🕒 6:00am - 9:00am, Oct 19

📍 Galway

Tutorials

Data quality issues have been widely recognized in IoT data, and prevent the downstream applications. Improving IoT data quality however is particularly challenging, given the distinct features over the IoT data such as pervasive noises, unaligned timestamps, consecutive errors, misplaced columns, correlated errors and so on. In this tutorial, we review the state-of-the-art techniques for IoT data quality management. In particular, we discuss how the dedicated approaches improve various data quality dimensions, including validity, completeness and consistency. Among others, we further highlight the recent advances by deep learning techniques for IoT data quality. Finally, we indicate the open problems in IoT data quality management, such as benchmark or interpretation of data quality issues.

Shaoxu Song; Aoqian Zhang

14th International Workshop on Data and Text Mining in Biomedical Informatics (DTMBio) - Part 1

🕒 6:00am - 11:00am, Oct 19

📍 Waterford

Workshops

The focus of this workshop is to bring together researchers who are interested in applying advanced biomedical big-data and text mining techniques to improve sharing, integration, managing and understanding of biomedical information.

Workshop Chairs:

Hyojung Paik PhD, Senior Researcher, Korea Institute of Science and Technology Institute

Mark Stevenson PhD, Senior Lecturer, Dept. of Computer Science, University of Sheffield, UK

Sunyong Yoo PhD, Assistant Professor, School of Electronics and Computer Engineering, Connam National University, Korea

Albert No PhD, Assistant Professor, Dept. of Electronic and Electrical Engineering, Hongik University, Korea

Hojung Nam PhD, Associate Professor, School of Electrical Engineering and Computer Science, Gwangju Institute of Science and Technology, Korea

1st International Workshop Investigating Learning During Web Search (IWILDS) - Part 1

🕒 6:00am - 11:00am, Oct 19

📍 Cork

Workshops

Web search is one of the most ubiquitous online activities, commonly used for learning purposes, i.e. to acquire or extend one's knowledge or skills about certain topics or procedures. The importance of learning as an outcome of Web search has also been recognized in research at the intersection of information retrieval, human-computer interaction, psychology, and educational sciences. When learning by searching the Web, individuals are confronted with an unprecedented amount of information of varying quality. Thus, successful learning on the Web requires high degrees of self-regulation and might be supported by an adequate design of search or recommender systems and training tools. Search as Learning (SAL) research examines relationships between querying, navigation, and reading behavior during Web search and the resulting learning outcomes, and how they can be measured, predicted, and supported.

Building on the growing research community of SAL, IWILDS provides an interdisciplinary forum in a full-day workshop that consists of keynotes, presentations of accepted papers, and discussion. The intended audience consists of researchers and practitioners from the general areas of computer science, psychology, information science, and educational science.

Workshop Chairs:

Anett Hoppe, Leibniz Information Centre for Science & Technology (TIB), Hannover, Germany

Ran Yu, Leibniz Institute for the Social Sciences (GESIS), Cologne, Germany

Yvonne Kammerer, Leibniz-Institut für Wissensmedien (IWM), Tübingen, Germany / Open Universiteit, Heerlen, The Netherlands

Ladislao Salmerón, University of Valencia, Department of Developmental and Educational Psychology, Research Unit on Reading (ERI Lectura), Valencia, Spain

8:00am

Neural Bayesian Information Processing

🕒 8:00am - 11:00am, Oct 19

📍 Dublin

Tutorials

This half-day tutorial addresses the fundamentals and advances in deep Bayesian learning for a variety of information systems ranging from speech recognition to document summarization, text classification, information extraction, image caption generation, sentence/image generation, dialogue management, sentiment classification, recommendation system, question answering and machine translation, to name a few. Traditionally, "deep learning" is taken to be a learning process from source inputs to target outputs where the inference or optimization is based on the real-valued deterministic model. The "semantic structure" in words, sentences, entities, images, videos, actions and documents may not be well expressed or correctly optimized in mathematical logic or computer programs. The "distribution function" in discrete or continuous latent variable model for natural sentences or images may not be properly decomposed or estimated. A systematic and elaborate transfer learning is required to meet source and target domains. This tutorial addresses the fundamentals of statistical models and neural networks, and focus on a series of advanced Bayesian models and deep models including variational autoencoder (VAE), stochastic temporal convolutional network, stochastic recurrent neural network, sequence-to-sequence model, attention mechanism, memory-augmented neural network, skip neural network, temporal difference VAE, predictive state neural network, and generative or normalizing flow. Enhancing the prior/posterior representation is addressed. We present how these models are connected and why they work for information and knowledge management on symbolic and complex patterns in temporal and spatial data. The variational inference and sampling method are formulated to tackle the optimization for complicated

models. The word, sentence and image embeddings are merged with structural or semantic constraint. A series of case studies are presented to tackle different issues in neural Bayesian information processing. At last, we will point out a number of directions and outlooks for future studies. This tutorial serves the objectives to introduce novices to major topics within deep Bayesian learning, motivate and explain a topic of emerging importance for data mining and information retrieval, and present a novel synthesis combining distinct lines of machine learning work.

Jen-Tzung Chien

3:00pm

Knowledge Graphs; A Half Day Tutorial on the History of Knowledge Graph's Main Ideas

🕒 3:00pm - 6:00pm, Oct 19

📍 Limerick

Tutorials

Knowledge Graphs can be considered as fulfilling an early vision in Computer Science of creating intelligent systems that integrate knowledge and data at large scale. Stemming from scientific advancements in research areas of Semantic Web, Databases, Knowledge representation, NLP, Machine Learning, among others, Knowledge Graphs have rapidly gained popularity in academia and industry in the past years. The integration of such disparate disciplines and techniques give the richness to Knowledge Graphs, but also present the challenge to practitioners and theoreticians to know how current advances develop from early techniques in order, on one hand, take full advantage of them, and on the other, avoid reinventing the wheel. This tutorial will provide a historical context on the roots of Knowledge Graphs grounded in the advancements of Logic, Data and the combination thereof.

Tutors:

Juan F. Sequeda; Claudio Gutierrez

Fairness in Unsupervised Learning

🕒 3:00pm - 6:00pm, Oct 19

📍 Galway

Tutorials

Data in digital form is expanding at an exponential rate, far outpacing any chance of getting any significant fraction labelled manually. This has resulted in heightened research emphasis on unsupervised learning, learning in the absence of labels. In fact, unsupervised learning has been often dubbed as the next frontier of AI. Unsupervised learning is the only plausible model to analyze the bulk of passively collected data that spans across various domains; e.g., social media footprints, safety/surveillance cameras, IoT devices, sensors, smartphone apps, medical wearables, traffic sensing devices and public wi-fi access. While fairness in supervised learning, such as classification tasks, has inspired a large amount of research in the past few years, work on fair unsupervised learning has been relatively slow in picking up. This tutorial targets to provide an overview of: (i) fairness principles drawing abundantly from political philosophy placed within the backdrop of motivating scenarios from unsupervised learning, (ii) current research in fair algorithms for unsupervised learning, and (iii) new directions to extend the state-of-the-art in fair unsupervised learning. While we intend to broadly cover all tasks in unsupervised learning, our focus will be on clustering, retrieval and representation learning. In a unique departure from conventional data science tutorials, we will place significant emphasis on presenting and debating pertinent literature from ethics and philosophy. Overall, there will be a strong emphasis on ensuring strong interdisciplinarity, with the instructor team having expertise in both computer science and political philosophy.

We start the tutorial with an introduction followed by a set of motivating unsupervised analytics scenarios which illustrate the need for addressing fairness considerations. Next, we will outline several principles of fairness which will include streams explored in ML literature (e.g., individual and group fairness), as well as popular notions of fairness within political philosophy, chiefly, Rawlsian fairness and several notions within the Rawlsian family. This will be followed by analyzing classical unsupervised learning algorithms from the perspective of fairness, as well as a reasonably comprehensive review of fair unsupervised learning algorithms. We will then outline several interesting directions for future work, targeted at young researchers in the audience who may be interested in embarking on fair ML research.

3rd Workshop Advances in Interpretable ML and AI (AIMLAI) - Part 1

🕒 3:00pm - 8:00pm, Oct 19

📍 Dublin

Workshops

Recent technological advances rely on accurate decision support systems that can be perceived as black boxes due to their overwhelming complexity. This lack of transparency can lead to technical, ethical, legal, and trust issues. For example, if the control module of a self-driving car failed at detecting a pedestrian, it becomes crucial to know why the system erred. In some other cases, the decision system may reflect unacceptable biases that can generate distrust. The General Data Protection Regulation (GDPR), approved by the European Parliament in 2018, suggests that individuals should be able to obtain explanations of the decisions made from their data by automated processing, and to challenge those decisions. All these reasons have given rise to the domain of interpretable AI. AIMLAI (Advances in Interpretable Machine Learning and Artificial Intelligence) aims at gathering researchers, experts and professionals, from inside and outside the domain of AI, interested in the topic of interpretable ML and interpretable AI. The workshop encourages interdisciplinary collaborations, with particular emphasis in knowledge management, infovis, human computer interaction and psychology. It also welcomes applied research for use cases where interpretability matters.

1st Workshop Semantic and Knowledge Graph Advances for Journalism

🕒 3:00pm - 8:00pm, Oct 19

📍 Kilkenny

Workshops

A massive amount of news information is being shared online every day by individuals and media companies. It is difficult for a human to deal with this large-scale data without computational support. Knowledge Graphs (KGs) are emerging as a representation infrastructure to support the organisation, integration and representation of journalistic content. KGs are used in numerous applications such as search, question answering, recommendation systems, data integration and across diverse application domains such as geosciences, healthcare, finance, e-commerce, oil and gas, creative industries and cultural heritage. In recent years, KGs have started to emerge in the journalism domain and it was, for example, the technology being used for processing the Panama papers¹. The goal of this workshop is to look at the recent development in the use of KGs in journalism and also to discuss the main challenges to the adaptation of this technology. Moreover, the workshop aims to cover both technological and scientific aspects related to KGs as well as practical deployment and commercial exploitation. Specifically, the workshop will focus on four different aspects: i) journalism KGs generation, enrichment, and evaluation; ii) ontologies & linked open data for journalism; iii) techniques and applications of KGs; iv) and mining journalism KGs. This workshop is an excellent chance to inspire experts and researchers to share theoretical and practical knowledge of the various aspects related to KGs applications for journalism and to help them convert their ideas into the innovations of the future.

5th International Workshop Mining Actionable Insights from Social Networks (MAISoN 2020) - Part 1

🕒 3:00pm - 8:00pm, Oct 19

📍 Athlone

Workshops

The MAISoN workshop on Mining Actionable Insights from Social Networks is a yearly event, now approaching its 5th edition. For this edition, we plan to run a special edition of the workshop with focus on dis/misinformation mining from social networks at CIKM 2020, which will take place at Galway, Ireland. We believe this is especially timely and will definitely attract a lot of interest from the community because of the Coronavirus virus (COVID-19) epidemic, misinformation has been spreading over social networks rapidly. The need to consider misinformation on social networks is becoming ever more pertinent and relevant.

The aim of this special edition is to bring together researchers from different disciplines interested in mining dis/misinformation on social networks. In particular, the goal is to discuss research that goes beyond descriptive analysis of social media data or incremental algorithmic improvements on synthetic or existing datasets. Instead, the distinguishing focus of this special edition is its emphasis on techniques that use social network data for building diagnostic, predictive and prescriptive analysis models related to misinformation. This means that there is rigorous attention for techniques that can be used to understand how and why dis/misinformation is created and spread, to uncover hidden and unexpected aspects of dis/misinformation content, and to recommend insightful countermeasures to restrict the circulation of dis/misinformation and alleviate their negative effects.

Workshop Chairs:

Ebrahim Bagheri, Ryerson University, Toronto, Canada

Huan Liu, Arizona State University, Arizona, United States

Kai Shu, Arizona State University, Arizona, United States

Fattane Zarrinkalam, Ryerson University, Toronto, Canada

5:00pm

Mining User Interests from Social Media

🕒 5:00pm - 8:00pm, Oct 19

📍 Sligo

Tutorials

The abundance of user generated content on social media provides the opportunity to build models that are able to accurately and effectively extract, mine and predict users' interests with the hopes of enabling more effective user engagement, better quality delivery of appropriate services and higher user satisfaction. While traditional methods for building user profiles relied on AI-based preference elicitation techniques that could have been considered to be intrusive and undesirable by the users, more recent advances are focused on a non-intrusive yet accurate way of determining users' interests and preferences. In this tutorial, we will cover five important aspects related to the effective mining of user interests: 1) The information sources that are used for extracting user interests; 2) Various types of user interest profiles that have been proposed in the literature; 3) Techniques that have been adopted or proposed for mining user interests, 4) The scalability and resource requirements of the state of the art methods; 5) The evaluation methodologies that are adopted in the literature for validating the appropriateness of the mined user interest profiles. We will also introduce existing challenges, open research question and exciting opportunities for further work.

Tue, Oct 20, 2020

6:00am

Network Alignment: Recent Advances and Future Directions

🕒 6:00am - 9:00am, Oct 20

📍 Limerick

Tutorials

In the era of big data, networks are often from multiple sources such as the social networks of diverse platforms (e.g., Facebook, Twitter), protein-protein interaction (PPI) networks of different tissues, transaction networks at multiple financial institutes and knowledge graphs derived from a variety of knowledge bases (e.g., DBpedia, Freebase, etc.). The very first step before exploring insights from these multi-sourced networks is to integrate and unify different networks. In general, network alignment is such a task that aims to uncover the correspondences among nodes across different graphs. The challenges of network alignment include: (1) the heterogeneity of the multi-sourced networks, e.g., different structural patterns, (2) the variety of the real-world networks, e.g., how to leverage the rich contextual information, and (3) the computational complexity. The goal of this tutorial is to (1) provide a comprehensive overview of the recent advances in network alignment, and (2) identify the open challenges and future trends. We believe this can be beneficial to numerous application problems, and attract both researchers and practitioners from both data mining area and other interdisciplinary areas. In particular, we start with

introducing the backgrounds, problem definition and key challenges of network alignment. Next, our emphases will be on (1) the recent techniques on addressing network alignment problem and other related problems with a careful balance between the algorithms and applications, and (2) the open challenges and future trends.

Tutors:

Si Zhang; Hanghang Tong

Introduction to Computer Vision and Realtime Deep Learning-based Object Detection

🕒 6:00am - 9:00am, Oct 20

📍 Galway

Tutorials

Computer vision (CV) is a field of artificial intelligence that trains computers to interpret and understand the visual world for a variety of exciting downstream tasks such as self-driving cars, checkout-less shopping, smart cities, cancer detection, and more. The field of CV has been revolutionized by deep learning over the last decade. This tutorial looks under the hood of modern day CV systems, and builds out some of these tech pipelines in a Jupyter Notebook using Python, OpenCV, Keras and Tensorflow. While the primary focus is on digital images from cameras and videos, this tutorial will also introduce 3D point clouds, and classification and segmentation algorithms for processing them.

More concretely, we will briefly overview the basics of computer vision, and object detection, progressing from object detection's earlier attempts based on dense multiscale sliding windows of Histogram of Oriented Gradients (HOG) features in conjunction with support vector machine classifiers, to modern day pipelines based upon deep fully convolutional neural networks (FCNN). These modern day pipelines are based on complex FCNN architectures (often 50-60 layers deep), multi-task loss functions, and are either two-stage (e.g., Faster R-CNN) or single-stage (e.g., YOLO/SSD) in nature. Recent revolutionary architectures such as the DETection TRansformer (DETR) will also be presented. Core concepts will be demonstrated with examples, code, and exercises. This will culminate with a demonstration (and a challenge) on how to build, train, and evaluate computer vision applications with a primary focus on building an object detection application from scratch to detect logos in images/video.

Tutors:

James Shanahan

9th International Symposium "From Data to Models and Back" (DataMod) - Part 1

🕒 6:00am - 11:00am, Oct 20

📍 Cork

Workshops

DataMod 2020 aims to bring together practitioners and researchers from academia, industry and research institutions interested in the combined application of data-driven techniques from the areas of knowledge management, data mining and machine learning with computational modelling methods. Modelling methodologies of interest include, but are not restricted to, automata, agents, Petri nets, process algebras and rewriting systems. Application domains include social systems, ecology, biology, medicine, smart cities, governance, education, software engineering, and any other field that deals with complex systems and large amounts of data. Papers can present research results in any of the themes of interest for the symposium as well as application experiences, tools and promising preliminary ideas. Papers dealing with synergistic approaches that integrate knowledge management/discovery and modelling or that exploit knowledge management/discovery to develop/synthesise system models are especially welcome.

Workshop Chairs:

Juliana Bowles, School of Computer Science, University of St Andrews, UK

Giovanna Broccia, FMT Lab, ISTI-CNR, Italy

Dr Mirco Nanni, KDD Lab, ISTI-CNR, Italy

3rd International Workshop Entity Retrieval and Learning (EYRE)

🕒 6:00am - 11:00am, Oct 20

📍 Waterford

Workshops

The intention of over half of Web queries is to find a particular entity, or entities of a particular type. Entities and structured representations (i.e., knowledge graphs) became popular in the recent past and hence, tremendous interest is in this area at the moment. Beyond the traditional text-based retrieval and learning problems, the recent surge in entity-centered structured data on the Web like Wikidata and progress in deep and machine learning techniques enable more powerful entity-centered solutions, but also bring new challenges. The hybrid exploitation of unstructured and structured data and their use in experiments ranging from traditional machine learning to advanced deep learning techniques have led to diversified involvement of researchers and practitioners in the areas of IR, Database, Semantic Web, and Machine and Deep Learning. There is a demand for a platform where interdisciplinary studies of entity retrieval and learning can be presented, and focused discussions can take place. Therefore, a workshop on entity retrieval and learning is proposed.

Workshop Chairs:

Gong Cheng, Nanjing University, China

Kalpa Gunaratna, Samsung Research America, USA

Jun Wang, University College London, UK

3rd Workshop on Knowledge-driven Analytics and Systems Impacting Human Quality of Life (KDAH-CIKM-2020)

🕒 6:00am - 11:00am, Oct 20

📍 Kilkenny

Workshops

Technology disruption through knowledge driven intelligent systems is gradually controlling human life. Management of the knowledge-driven artificial intelligence- based technologies is of highest importance to maximize its progressive influence on human life and human society. Social network affinity, technology-abuse negatively affect our physical, emotional, social and mental health. Conversely, intelligent systems have the capability to bring positive impact on human life. This workshop will bring forward those positive applications and technologies as well as the path towards transformation of intelligent systems that minimize the negative impacts. The intended thrust is to promote the development of human-centric intelligent technologies like precise and personalized medication and prognosis prediction, improved elderly care, minimizing private data theft, knowledge-driven energy and resource management, deep learning and artificial intelligence-based applications for risk prediction and augmented human capability generation and related others. This workshop aims to bring research outcomes and insights that demonstrate the knowledge-driven technologies, developments, applications for ensuring improvement of human quality of life. The impact would be micro-level, where human life gets impacted in daily basis and at macro-level where human life would be impacted in long term with pronounced influence on the betterment to human society.

8:00am

Multi-Model Data Query Languages and Processing Paradigms

🕒 8:00am - 11:00am, Oct 20

📍 Dublin

Tutorials

Numerous data models were proposed for practical purposes, which pose a great challenge for big data management. Specifying a database query using a formal query language is a typically challenging task. In the context of the multi-model data, this problem becomes even harder because it requires the users to deal with data of different types. It usually lacks a unified schema to help the users issuing their queries, or have an incomplete schema as data come from disparate sources. Multi-Model DataBases (MMDBs) have been developed to facilitate the management of multi-model data. In this tutorial we offer a comprehensive presentation of a wide range of multi-model data query languages and to make a comparison of their key properties. The tutorial also offer the participants hands-on experience in issuing queries over MMDBs. In addition, we also address the essence of multi-model query processing and provide insights on the research challenges and directions for future work.

Compression of Deep Learning Models for Text

🕒 3:00pm - 6:00pm, Oct 20

📍 Limerick

Tutorials

In recent years, the fields of NLP and information retrieval have made tremendous progress thanks to deep learning models like RNNs and LSTMs, and Transformer based models like BERT. But these models are humongous in size. Real world applications however demand small model size, low response times and low computational power wattage. We will discuss six different types of methods (pruning, quantization, knowledge distillation, parameter sharing, matrix decomposition, and other Transformer based methods) for compression of such models to enable their deployment in real industry NLP projects. Given the critical need of building applications with efficient and small models, and the large amount of recently published work in this area, we believe that this tutorial is very timely. We will organize related work done by the 'deep learning for NLP' community in the past few years and present it as a coherent story.

3rd Workshop Advances in Interpretable ML and AI (AIMLAI) - Part 2

🕒 3:00pm - 8:00pm, Oct 20

📍 Dublin

Workshops

Recent technological advances rely on accurate decision support systems that can be perceived as black boxes due to their overwhelming complexity. This lack of transparency can lead to technical, ethical, legal, and trust issues. For example, if the control module of a self-driving car failed at detecting a pedestrian, it becomes crucial to know why the system erred. In some other cases, the decision system may reflect unacceptable biases that can generate distrust. The General Data Protection Regulation (GDPR), approved

by the European Parliament in 2018, suggests that individuals should be able to obtain explanations of the decisions made from their data by automated processing, and to challenge those decisions. All these reasons have given rise to the domain of interpretable AI. AIMLAI (Advances in Interpretable Machine Learning and Artificial Intelligence) aims at gathering researchers, experts and professionals, from inside and outside the domain of AI, interested in the topic of interpretable ML and interpretable AI. The workshop encourages interdisciplinary collaborations, with particular emphasis in knowledge management, infovis, human computer interaction and psychology. It also welcomes applied research for use cases where interpretability matters.

1st Workshop Combining Symbolic and Sub-symbolic Methods and their Applications (CSSA)

🕒 3:00pm - 8:00pm, Oct 20

📍 Galway

Workshops

There has been a rapid growth in the use of symbolic representations along with their applications in many important tasks. Symbolic representations, in the form of Knowledge Graphs (KGs), constitute large networks of real-world entities and their relationships. On the other hand, sub-symbolic artificial intelligence has also become an important area of research which is inspired by how information is propagated in the (human) brain. These algorithms create an artificial neural network, with nodes (called neurons). Many studies have been proposed which focus on learning distributed representations from KGs. These KGs are generated manually or automatically by processing text or other data sources. These embedding techniques are typically based on translational, factorization, or random walk based methods. Other approaches apply neural network ideas directly onto the graph, like graph convolutional networks. These approaches have been successfully applied to Knowledge Base Completion, Link Prediction, question answering, text classification, etc. In order to pursue more advanced methodologies, it has become critical that these two communities join forces in order to develop more effective algorithms and applications.

📍 Cork

Workshops

DataMod 2020 aims to bring together practitioners and researchers from academia, industry and research institutions interested in the combined application of data-driven techniques from the areas of knowledge management, data mining and machine learning with computational modelling methods. Modelling methodologies of interest include, but are not restricted to, automata, agents, Petri nets, process algebras and rewriting systems. Application domains include social systems, ecology, biology, medicine, smart cities, governance, education, software engineering, and any other field that deals with complex systems and large amounts of data. Papers can present research results in any of the themes of interest for the symposium as well as application experiences, tools and promising preliminary ideas. Papers dealing with synergistic approaches that integrate knowledge management/discovery and modelling or that exploit knowledge management/discovery to develop/synthesise system models are especially welcome.

Workshop Chairs:

Juliana Bowles, School of Computer Science, University of St Andrews, UK

Giovanna Broccia, FMT Lab, ISTI-CNR, Italy

Dr Mirco Nanni, KDD Lab, ISTI-CNR, Italy

5th International Workshop Mining Actionable Insights from Social Networks (MAISoN 2020) - Part 2

🕒 3:00pm - 8:00pm, Oct 20

📍 Athlone

Workshops

The MAISoN workshop on Mining Actionable Insights from Social Networks is a yearly event, now approaching its 5th edition. For this edition, we plan to run a special edition of the workshop with focus on dis/misinformation mining from social networks at CIKM 2020, which will take place at Galway, Ireland. We believe this is especially timely and will definitely attract a lot of interest from the community because of the Coronavirus virus (COVID-19) epidemic, misinformation has been spreading over social networks rapidly. The need to consider misinformation on social networks is becoming ever more pertinent and relevant.

The aim of this special edition is to bring together researchers from different disciplines interested in mining dis/misinformation on social networks. In particular, the goal is to discuss research that goes beyond descriptive analysis of social media data or incremental algorithmic improvements on synthetic or existing datasets. Instead, the distinguishing focus of this special edition is its emphasis on techniques that use social network data for building diagnostic, predictive and prescriptive analysis models related to misinformation. This means that there is rigorous attention for techniques that can be used to understand how and why dis/misinformation is created and spread, to uncover hidden and unexpected aspects of dis/misinformation content, and to recommend insightful countermeasures to restrict the circulation of dis/misinformation and alleviate their negative effects.

Workshop Chairs:

Ebrahim Bagheri, Ryerson University, Toronto, Canada

Huan Liu, Arizona State University, Arizona, United States

Kai Shu, Arizona State University, Arizona, United States

Fattane Zarrinkalam, Ryerson University, Toronto, Canada

3:40pm

Databases

🕒 3:40pm - 4:50pm, Oct 20

📍 Sligo

Doctoral Consortium

3 Subsessions

- **How the quantum-inspired framework supports keyword searches on multi-model databases**

🕒 3:40pm - 4:00pm, Oct 20

- **Tailoring Active Learning to Industrial Entity Matching**

🕒 4:00pm - 4:20pm, Oct 20

- **Break**

🕒 4:20pm - 4:50pm, Oct 20

4:50pm

Knowledge Graph/LOD

🕒 4:50pm - 5:50pm, Oct 20

📍 Sligo

Doctoral Consortium

2 Subsessions

- **Computational approaches for drug repositioning : towards a holistic perspective based on knowledge graphs**

🕒 4:50pm - 5:10pm, Oct 20

- **Embedding based Link Prediction for Knowledge Graph Completion**

🕒 5:10pm - 5:30pm, Oct 20

5:00pm

The Battle Against Online Harmful Information: The Cases of Fake News and Hate Speech

🕒 5:00pm - 8:00pm, Oct 20

📍 Waterford

Tutorials

Social media platforms have given the opportunity to users to publish content and express their opinions online in a very fast and easy way. The ease of posting content online and the anonymity of social media have increased the amount of harmful content that is published. This tutorial will focus on the detection of harmful information that is published online. In particular, the tutorial will focus on two types of harmful information, fake news and hate speech. The tutorial will start with an introduction of online harmful information including definitions and characteristics of the different types of harmful information. Then we will present and discuss different approaches that have been proposed for fake news and hate speech detection. We will also present details regarding the evaluation process, available datasets and shared evaluation tasks. The tutorial will conclude with a discussion on open issues and future directions in the field of online harmful information detection.

Tutors:

Anastasia Giachanou; Paolo Rosso

5:30pm

Closing with Optional Discussion

🕒 5:30pm - 5:50pm, Oct 20

📍 Sligo

Wed, Oct 21, 2020

6:00am

Introduction to CIKM

🕒 6:00am - 7:00am, Oct 21

📍 Dublin

Plenary sessions

7:00am

Urban computing: traffic and passenger flows

🕒 7:00am - 8:42am, Oct 21

📍 Dublin

Research Track Long Papers

6 Subsessions

- **ST-GRAT: A Spatio-Temporal Graph Attention Network for Traffic Forecasting**
🕒 7:00am - 7:17am, Oct 21
- **Deep Graph Convolutional Networks for Incident-driven Traffic Speed Prediction**
🕒 7:17am - 7:34am, Oct 21
- **STP-TrellisNets: Spatial-Temporal Parallel TrellisNets for Metro Station Passenger Flow Prediction**
🕒 7:34am - 7:51am, Oct 21
- **Spatiotemporal Adaptive Gated Graph Convolution Network for Urban Traffic Flow Forecasting**
🕒 7:51am - 8:08am, Oct 21
- **Spatial-Temporal Convolutional Graph Attention Networks for Citywide Traffic Flow Forecasting**
🕒 8:08am - 8:25am, Oct 21
- **Short Break**
🕒 8:25am - 8:42am, Oct 21

Entities and relations

🕒 7:00am - 8:42am, Oct 21

📍 Cork

Research Track Long Papers

6 Subsessions

- **Relational Reflection Entity Alignment**
🕒 7:00am - 7:17am, Oct 21
- **Generating Categories for Sets of Entities**
🕒 7:17am - 7:34am, Oct 21
- **Cross-sentence N-ary Relation Extraction using Entity Link and Discourse Relation**
🕒 7:34am - 7:51am, Oct 21
- **Meta-Learning for Neural Relation Classification with Distant Supervision**
🕒 7:51am - 8:08am, Oct 21
- **MICK: A Meta-Learning Framework for Few-shot Relation Classification with Small Training Data**
🕒 8:08am - 8:25am, Oct 21
- **Short Break**
🕒 8:25am - 8:42am, Oct 21

Knowledge graphs I

🕒 7:00am - 8:42am, Oct 21

📍 Limerick

Research Track Long Papers

6 Subsessions

- **Rotate3D: Representing Relations as Rotations in Three-Dimensional Space for Knowledge Graph Embedding**
🕒 7:00am - 7:17am, Oct 21
- **How and Why is An Answer (Still) Correct? Maintaining Provenance in Dynamic**

Knowledge Graphs

🕒 7:17am - 7:34am, Oct 21

- **Towards Temporal Knowledge Graph Embeddings with Arbitrary Time Precision**
🕒 7:34am - 7:51am, Oct 21
- **Knowledge Graph Embedding Preserving Soft Logical Regularity**
🕒 7:51am - 8:08am, Oct 21
- **Multi-modal Knowledge Graphs for Recommender Systems**
🕒 8:08am - 8:25am, Oct 21
- **Short Break**
🕒 8:25am - 8:42am, Oct 21

Urban computing I

🕒 7:00am - 8:42am, Oct 21

📍 Galway

Research Track Long Papers

6 Subsessions

- **GeneraLight: Improving Environment Generalization of Traffic Signal Control via Meta Reinforcement Learning**
🕒 7:00am - 7:17am, Oct 21
- **Cooperative Multi-Agent Reinforcement Learning in Express System**
🕒 7:17am - 7:34am, Oct 21
- **Knowledge Adaption for Demand Prediction based on Multi-task Memory Neural Network**
🕒 7:34am - 7:51am, Oct 21
- **EnDeA: Ensemble based Decoupled Adversarial Learning for Identifying Infrastructure Damage during Disasters**
🕒 7:51am - 8:08am, Oct 21
- **ReISen: An Optimization-based Framework for Simultaneously Sensor Reliability Monitoring and Data Cleaning**
🕒 8:08am - 8:25am, Oct 21
- **Short Break**
🕒 8:25am - 8:42am, Oct 21

Spatio-temporal analytics

🕒 7:00am - 10:00am, Oct 21

📍 Waterford

Research Track Short Papers

6 Subsessions

- **Modelling Regional Crime Risk using Directed Graph of Check-ins**
🕒 7:00am - 7:13am, Oct 21
- **Event-Driven Network for Cross-Modal Retrieval**
🕒 7:13am - 7:26am, Oct 21
- **DATSING: Data Augmented Time Series Forecasting with Adversarial Domain Adaptation**
🕒 7:26am - 7:39am, Oct 21

- **Seasonal-Periodic Subgraph Mining in Temporal Networks**
🕒 7:39am - 7:52am, Oct 21
- **Time-aware Graph Relational Attention Network for Stock Recommendation**
🕒 7:52am - 8:05am, Oct 21
- **A reproducibility study of deep and surface machine learning methods for human-related trajectory prediction**
🕒 8:05am - 8:18am, Oct 21

News

🕒 7:00am - 8:59am, Oct 21

📍 Kilkenny

Resource Track

7 Subsessions

- **CC-News-En: A Large English Newswire Corpus**
🕒 7:00am - 7:17am, Oct 21
- **A Multidimensional Dataset for Analyzing and Detecting News Bias based on Crowdsourcing**
🕒 7:17am - 7:34am, Oct 21
- **TweetsCOVID-19 - A Knowledge Base of Semantically Annotated Tweets about the COVID-19 Pandemic**
🕒 7:34am - 7:51am, Oct 21
- **CauseNet: Towards a Causality Graph Extracted from the Web**
🕒 7:51am - 8:08am, Oct 21
- **A Dataset of Journalists' Interactions With Their Readership: When Should Article Authors Reply to Reader Comments?**
🕒 8:08am - 8:25am, Oct 21
- **The Newspaper Navigator Dataset: Extracting Headlines and Visual Content From 16 Million Historic Newspaper Pages in Chronicling America**
🕒 8:25am - 8:42am, Oct 21
- **ReCOVeRY: A Multimodal Repository for COVID-19 News Credibility Research**
🕒 8:42am - 8:59am, Oct 21

User Behaviour

🕒 7:00am - 10:00am, Oct 21

📍 Athlone

Applied Research Track

11 Subsessions

- **Deep Behavior Tracing with Multi-level Temporality Preserved Embedding**
🕒 7:00am - 7:17am, Oct 21
- **Match Tracing: A Unified Framework for Real-time Win Prediction and Quantifiable Performance Evaluation**
🕒 7:17am - 7:34am, Oct 21
- **aDMSCN: A Novel Perspective for User Intent Prediction in Customer Service Bots**
🕒 7:34am - 7:51am, Oct 21

- **MiNet: Mixed Interest Network for Cross-Domain Click-Through Rate Prediction**
🕒 7:51am - 8:08am, Oct 21
- **Masked-field Pre-training for User Intent Prediction**
🕒 8:08am - 8:25am, Oct 21
- **A Deep Prediction Network for Understanding Advertiser Intent and Satisfaction**
🕒 8:25am - 8:42am, Oct 21
- **Intent-Driven Similarity in E-Commerce Listings**
🕒 8:42am - 8:59am, Oct 21
- **Learning to Build User-tag Profile in Recommendation System**
🕒 8:59am - 9:16am, Oct 21
- **Learning to Profile: User Meta-Profile Network for Few-Shot Learning**
🕒 9:16am - 9:33am, Oct 21
- **Prospective Modeling of Users for Online Display Advertising via Deep Time-Aware Model**
🕒 9:33am - 9:50am, Oct 21
- **Short Break**
🕒 9:50am - 10:00am, Oct 21

8:42am

Question answering and dialogue systems I

🕒 8:42am - 10:00am, Oct 21

📍 Dublin

Research Track Long Papers

5 Subsessions

- **Learning to Detect Relevant Contexts and Knowledge for Response Selection in Retrieval-based Dialogue Systems**
🕒 8:42am - 8:59am, Oct 21
- **Query-to-Session Matching: Do NOT Forget History and Future during Response Selection for Multi-Turn Dialogue Systems**
🕒 8:59am - 9:16am, Oct 21
- **Opinion-aware Answer Generation for Review-driven Question Answering in E-Commerce**
🕒 9:16am - 9:33am, Oct 21
- **Hierarchical Query Graph Generation for Complex Question Answering over Knowledge Graph**
🕒 9:33am - 9:50am, Oct 21
- **Providing Direct Answers in Search Results: A Study of User Behavior**
🕒 9:50am - 10:00am, Oct 21

Understanding, interpretability and explainability

🕒 8:42am - 10:00am, Oct 21

📍 Cork

Research Track Long Papers

5 Subsessions

- **QSAN: A Quantum-probability based Signed Attention Network for Explainable False Information Detection**
🕒 8:42am - 8:59am, Oct 21
- **Shapley Values and Meta-Explanations for Probabilistic Graphical Model Inference**
🕒 8:59am - 9:16am, Oct 21
- **Generating Neural Template Explanations for Recommendation**
🕒 9:16am - 9:33am, Oct 21
- **GNNVis: Visualize Large-Scale Data by Learning a Graphical Neural Network Representation**
🕒 9:33am - 9:50am, Oct 21
- **Do People and Neural Networks Pay Attention to the Same Words? Studying Eye-tracking Data for Non-factoid QA Evaluation**
🕒 9:50am - 10:00am, Oct 21

Personalization

🕒 8:42am - 10:00am, Oct 21

📍 Limerick

Research Track Long Papers

5 Subsessions

- **Logical Structure Representation Learning with Graph Embedding for Personalized Product Search**
🕒 8:42am - 8:59am, Oct 21
- **Personalized Re-ranking with Item Relationships for E-commerce**
🕒 8:59am - 9:16am, Oct 21
- **PSTIE: Time Information Enhanced Personalized Search**
🕒 9:16am - 9:33am, Oct 21
- **Knowledge-Enhanced Personalized Review Generation with Capsule Graph Neural Network**
🕒 9:33am - 9:50am, Oct 21
- **Short Break**
🕒 9:50am - 10:00am, Oct 21

Recommendation I

🕒 8:42am - 10:00am, Oct 21

📍 Galway

Research Track Long Papers

5 Subsessions

- **AutoFeature: Searching for Feature Interactions and Their Architectures for Click-through Rate Prediction**
🕒 8:42am - 8:59am, Oct 21
- **Deep Time-Aware Item Evolution Network for Click-Through Rate Prediction**
🕒 8:59am - 9:16am, Oct 21
- **Exploring Missing Interactions: A Convolutional Generative Adversarial Network for Collaborative Filtering**
🕒 9:16am - 9:33am, Oct 21

- **Hybrid Sequential Recommender via Time-aware Attentive Memory Network**
🕒 9:33am - 9:50am, Oct 21
- **Star Graph Neural Networks for Session-based Recommendation**
🕒 9:50am - 10:00am, Oct 21

8:59am

Potpourri

🕒 8:59am - 10:00am, Oct 21

📍 Kilkenny

Resource Track

4 Subsessions

- **GeoFlink: A Distributed and Scalable Framework for the Real-time Processing of Spatial Streams**
🕒 8:59am - 9:16am, Oct 21
- **Web Page Segmentation Revisited: Evaluation Framework and Dataset**
🕒 9:16am - 9:33am, Oct 21
- **MAEC: A Multimodal Aligned Earnings Conference Call Dataset for Financial Risk Prediction**
🕒 9:33am - 9:50am, Oct 21
- **Short break**
🕒 9:50am - 10:00am, Oct 21

📍 Dublin

Keynote talks

Accelerating Discovery Science with an Internet of FAIR Data and Services

Biomedicine has always been a fertile and challenging domain for computational discovery science. Indeed, the existence of millions of scientific articles, thousands of databases, and hundreds of ontologies, offer exciting opportunities to reuse our collective knowledge, were we not stymied by incompatible formats, overlapping and incomplete vocabularies, unclear licensing, and heterogeneous access points. In this talk, I will discuss our work to create computational standards, platforms, and methods to wrangle knowledge

into simple, but effective representations based on semantic web technologies that are maximally FAIR – Findable, Accessible, Interoperable, and Reuseable – and to further use these for biomedical knowledge discovery. But only with additional crucial developments will this emerging Internet of FAIR data and services enable automated scientific discovery on a global scale.

Ceres: Harvesting Knowledge from the Semi-structured Web

Knowledge graphs have been used to support a wide range of applications and enhance search and QA for Google, Amazon Alexa, etc. However, we often miss long-tail knowledge, including unpopular entities, unpopular relations, and unpopular verticals. In this talk we describe our efforts in harvesting knowledge from semi-structured websites, which are often populated according to some templates using vast volume of data stored in underlying databases. We describe our AutoCeres ClosedIE system, which improves the accuracy of fully automatic knowledge extraction from 60%+ of state-of-the-art to 90%+ on semi-structured data. We also describe OpenCeres, the first ever OpenIE system on semi-structured data, that is able to identify new relations not readily included in existing ontologies. In addition, we describe our other efforts in ontology alignment, entity linkage, graph mining, and QA, that allow us to best leverage the knowledge we extract for search and QA.

7:00am

Social and information networks

🕒 7:00am - 8:42am, Oct 22

📍 Dublin

Research Track Long Papers

6 Subsessions

- **A GAN-based Framework for Modeling Hashtag Popularity Dynamics using Assistive Information**
🕒 7:00am - 7:17am, Oct 22
- **WMEgo: Willingness Maximization for Ego Network Data Extraction in Online Social Networks**

🕒 7:17am - 7:34am, Oct 22

● **LRHNE: A Latent-Relation Enhanced Embedding Method for Heterogeneous Information Networks**

🕒 7:34am - 7:51am, Oct 22

● **An Adaptive Embedding Framework for Heterogeneous Information Networks**

🕒 7:51am - 8:08am, Oct 22

● **Genetic Meta-Structure Search for Recommendation on Heterogeneous Information Network**

🕒 8:08am - 8:25am, Oct 22

● **Short Break**

🕒 8:25am - 8:42am, Oct 22

Graph embeddings I

🕒 7:00am - 8:42am, Oct 22

📍 Cork

Research Track Long Papers

6 Subsessions

● **Fast Attributed Multiplex Heterogeneous Network Embedding**

🕒 7:00am - 7:17am, Oct 22

● **Attributed Network Embedding based on Mutual Information Estimation**

🕒 7:17am - 7:34am, Oct 22

● **Bringing Order to Network Embedding: A Relative Ranking based Approach**

🕒 7:34am - 7:51am, Oct 22

● **CSNE: Conditional Signed Network Embedding**

🕒 7:51am - 8:08am, Oct 22

● **Towards Locality-Aware Meta-Learning of Tail Node Embeddings on Networks**

🕒 8:08am - 8:25am, Oct 22

● **Short Break**

🕒 8:25am - 8:42am, Oct 22

Search & Ranking 2

🕒 7:00am - 8:31am, Oct 22

📍 Waterford

Research Track Short Papers

7 Subsessions

● **TABLE: A Task-Adaptive BERT-based Listwise Ranking Model for Document Retrieval**

🕒 7:00am - 7:13am, Oct 22

● **Gated Heterogeneous Graph Representation Learning for Shop Search in E-commerce**

🕒 7:13am - 7:26am, Oct 22

● **Diversifying Multi-aspect Search Results Using Simpson's Diversity Index**

🕒 7:26am - 7:39am, Oct 22

● **T-REX: A Topic-Aware Relation Extraction Model**

🕒 7:39am - 7:52am, Oct 22

- **What Rankers Can be Statistically Distinguished in Multileaved Comparisons?**
🕒 7:52am - 8:05am, Oct 22
- **Bridging the Gap between Click and Relevance for Learning-to-Rank with Minimal Supervision**
🕒 8:05am - 8:18am, Oct 22
- **Short Break**
🕒 8:18am - 8:31am, Oct 22

Neural Networks & Applications 1

🕒 7:00am - 10:00am, Oct 22

Cloudy With High Chance Of DBMS: A 10-year Prediction For Enterprise-Grade ML

Machine learning (ML) has proven itself in high-value web applications such as search ranking and is emerging as a powerful tool in a much broader range of enterprise scenarios including voice recognition and conversational understanding for customer support, auto-tuning for videoconferencing, intelligent feedback loops in large-scale sysops, manufacturing and autonomous vehicle management, complex financial predictions, just to name a few. Meanwhile, as the value of data is increasingly recognized and monetized, concerns about securing valuable data and risks to individual privacy have been growing. Furthermore broader adoption leads to less experience development teams, further increasing risks of misuse of these technologies. Rigorous data management has emerged as a key requirement in enterprise settings. How will these trends (ML growing popularity, and stricter data governance) intersect? What are the unmet requirements for applying ML in enterprise settings? What are the technical challenges for the DB community to solve? In this talk, we present a vision of how ML and database systems are likely to come together, and highlight fascinating early results towards in building Enterprise Grade Machine Learning (EGML).

4 Subsessions

- **Personalizing Natural Language Understanding using Multi-armed Bandits and Implicit Feedback**
🕒 5:59pm - 6:16pm, Oct 22
- **AGATHA: Automatic Graph mining and Transformer based Hypothesis generation Approach**
🕒 6:16pm - 6:33pm, Oct 22
- **Learning Formatting Style Transfer and Structure Extraction for Spreadsheet Tables with a Hybrid Neural Network Architecture**
🕒 6:33pm - 6:50pm, Oct 22
- **Crime Linkage Based on Textual Hebrew Police Reports Utilizing Behavioral Patterns**
🕒 6:50pm - 7:00pm, Oct 22

7:00pm

Keynote Talk: Xin Luna Dong (from recording)

🕒 7:00pm - 8:00pm, Oct 22

📍 Dublin

Keynote talks

Ceres: Harvesting Knowledge from the Semi-structured Web

Knowledge graphs have been used to support a wide range of applications and enhance search and QA for Google, Amazon Alexa, etc. However, we often miss long-tail knowledge, including unpopular entities, unpopular relations, and unpopular verticals. In this talk we describe our efforts in harvesting knowledge from semi-structured websites, which are often populated according to some templates using vast volume of data stored in underlying databases. We describe our AutoCeres ClosedIE system, which improves the accuracy of fully automatic knowledge extraction from 60%+ of state-of-the-art to 90%+ on semi-structured data. We also describe OpenCeres, the first ever OpenIE system on semi-structured data, that is able to identify new relations not readily included in existing ontologies. In addition, we describe our other efforts in ontology alignment, entity linkage, graph mining, and QA, that allow us to best leverage the knowledge we extract for search and QA.

Fri, Oct 23, 2020

6:00am

Keynote Talk: Carlo Curino (from recording)

🕒 6:00am - 7:00am, Oct 23

Keynote talks

Cloudy With High Chance Of DBMS: A 10-year Prediction For Enterprise-Grade ML

Machine learning (ML) has proven itself in high-value web applications such as search ranking and is emerging as a powerful tool in a much broader range of enterprise scenarios including voice recognition and conversational understanding for customer support, auto-tuning for videoconferencing, intelligent feedback loops in large-scale sysops, manufacturing and autonomous vehicle management, complex financial predictions, just to name a few. Meanwhile, as the value of data is increasingly recognized and monetized, concerns about securing valuable data and risks to individual privacy have been growing. Furthermore broader adoption leads to less experience development teams, further increasing risks of misuse of these technologies. Rigorous data management has emerged as a key requirement in enterprise settings. How will these trends (ML growing popularity, and stricter data governance) intersect? What are the unmet requirements for applying ML in enterprise settings? What are the technical challenges for the DB community to solve? In this talk, we present a vision of how ML and database systems are likely to come together, and highlight fascinating early results towards in building Enterprise Grade Machine Learning (EGML).

7:00am

Graph embeddings II

🕒 7:00am - 7:51am, Oct 23

📍 Dublin

Research Track Long Papers

3 Subsessions

- **G-CREWE: Graph CompREssion With Embedding for Network Alignment**
🕒 7:00am - 7:17am, Oct 23
- **Dynamic Representation Learning for Large-Scale Attributed Networks**
🕒 7:17am - 7:34am, Oct 23
- **Continuous-Time Dynamic Graph Learning via Neural Interaction Processes**
🕒 7:34am - 7:51am, Oct 23

Machine learning topics I

🕒 7:00am - 8:42am, Oct 23

📍 Cork

Research Track Long Papers

6 Subsessions

- **More Than One: A Cluster-Prototype Matching Framework for Zero-Shot Learning**
🕒 7:00am - 7:17am, Oct 23
- **Logic Enhanced Commonsense Inference with Chain Transformer**
🕒 7:17am - 7:34am, Oct 23
- **Carpe Diem, Seize the Samples Uncertain "at the Moment" for Adaptive Batch Selection**
🕒 7:34am - 7:51am, Oct 23

- **Succinct Adaptive Manifold Transfer**

🕒 7:51am - 8:08am, Oct 23

- **Neural Logical Prediction**

🕒 8:08am - 8:25am, Oct 23

- **LB-CGM: Latent Based Conditional Generative Model with Reliable Distribution Prediction**

🕒 8:25am - 8:42am, Oct 23

Recommendation IV

🕒 7:00am - 9:16am, Oct 23

📍 Limerick

Research Track Long Papers

7 Subsessions

- **Attacking Recommender Systems with Augmented User Profiles**

🕒 7:00am - 7:17am, Oct 23

- **Recommending Inferior Results: A General and Feature-Free Model for Spam Detection**

🕒 7:17am - 7:34am, Oct 23

- **TPR: Text-aware Preference Ranking for Recommender Systems**

🕒 7:34am - 7:51am, Oct 23

- **DisenHAN: Disentangled Heterogeneous Graph Attention Network for Recommendation**

🕒 7:51am - 8:08am, Oct 23

- **Cross Domain Recommendation via Bi-directional Transfer Graph Collaborative Filtering Networks**

🕒 8:08am - 8:25am, Oct 23

- **Partial Relationship Aware Influence Diffusion via Multi-channel Encoding Scheme for Social Recommendation**

🕒 8:25am - 8:42am, Oct 23

- **Short Break**

🕒 8:42am - 9:16am, Oct 23

NLP

🕒 7:00am - 8:42am, Oct 23

📍 Galway

Research Track Long Papers

6 Subsessions

- **Soap: Soaking Capacity Optimization for Multi-Document Summarization**

🕒 7:00am - 7:17am, Oct 23

- **Zero-Shot Retrieval of Images from Textual Descriptions**

🕒 7:17am - 7:34am, Oct 23

- **Learning to Distract: A Hierarchical Multi-Decoder Network for Automatic Generation of Long Distractors for Reading Comprehension**

🕒 7:34am - 7:51am, Oct 23

- **Controllable Multi-Character Psychology-Oriented Story Generation**
🕒 7:51am - 8:08am, Oct 23
- **Image Captioning with Internal and External Knowledge**
🕒 8:08am - 8:25am, Oct 23
- **Short Break**
🕒 8:25am - 8:42am, Oct 23

Graphs and Streams

🕒 7:00am - 8:31am, Oct 23

📍 Waterford

Research Track Short Papers

8 Subsessions

- **Generative Adversarial Attributed Network Anomaly Detection**
🕒 7:00am - 7:13am, Oct 23
- **Data Augmentation for Graph Classification**
🕒 7:13am - 7:26am, Oct 23
- **Are Negative Links Really Beneficial to Network Embedding? In-Depth Analysis and Interesting Results**
🕒 7:26am - 7:39am, Oct 23
- **NASE: Learning Knowledge Graph Embedding for Link Prediction via Neural Architecture Search**
🕒 7:39am - 7:52am, Oct 23
- **Community Identification in Signed Networks: A K-Truss Based Model**
🕒 7:52am - 8:05am, Oct 23
- **CR-Graph: Community Reinforcement for Accurate Community Detection**
🕒 8:05am - 8:18am, Oct 23
- **Rethinking Operators Placement of Stream Data Application in the Edge**
🕒 8:05am - 8:18am, Oct 23
- **Short Break**
🕒 8:18am - 8:31am, Oct 23

Recommender Systems

🕒 7:00am - 8:31am, Oct 23

📍 Kilkenny

Research Track Short Papers

7 Subsessions

- **Revisiting Alternative Experimental Settings for Evaluating Top-N Item Recommendation Algorithms**
🕒 7:00am - 7:13am, Oct 23
- **Leveraging Historical Interaction Data for Improving Conversational Recommender System**
🕒 7:13am - 7:26am, Oct 23
- **Dual Autoencoder Network with Swap Reconstruction for Cold-Start Recommendation**
🕒 7:26am - 7:39am, Oct 23

- **DREAM: A Dynamic Relation-Aware Model for social recommendation**
🕒 7:39am - 7:52am, Oct 23
- **Multiplex Graph Neural Networks for Multi-behavior Recommendation**
🕒 7:52am - 8:05am, Oct 23
- **Feedback Loop and Bias Amplification in Recommender Systems**
🕒 8:05am - 8:18am, Oct 23
- **Short Break**
🕒 8:18am - 8:31am, Oct 23

Knowledge Understanding

🕒 7:00am - 8:59am, Oct 23

📍 Athlone

Applied Research Track

7 Subsessions

- **Ensembled CTR Prediction via Knowledge Distillation**
🕒 7:00am - 7:17am, Oct 23
- **AliMeKG: Domain Knowledge Graph Construction and Application in E-commerce**
🕒 7:17am - 7:34am, Oct 23
- **Fusing Global Domain Information and Local Semantic Information to Classify Financial Documents**
🕒 7:34am - 7:51am, Oct 23
- **The Utility of Context When Extracting Entities From Legal Documents**
🕒 7:51am - 8:08am, Oct 23
- **TwinBERT: Distilling Knowledge to Twin-Structured Compressed BERT Models for Large-Scale Retrieval**
🕒 8:08am - 8:25am, Oct 23
- **Query-aware Tip Generation for Vertical Search**
🕒 8:25am - 8:42am, Oct 23
- **U-rank: Utility-oriented Learning to Rank with Implicit Feedback**
🕒 8:42am - 8:59am, Oct 23

Demos 1

🕒 7:00am - 9:16am, Oct 23

📍 Sligo

Posters & Demos

17 Subsessions

- **InterNet: Multistep Traffic Forecasting by Interacting Spatial and Temporal Features**
🕒 7:00am - 7:08am, Oct 23
- **UI-FAME: A High-Performance Forgetting System for Creating Views of Ontologies**
🕒 7:08am - 7:16am, Oct 23
- **Gtensor: Fast and Accurate Tensor Analysis System using GPUs**
🕒 7:16am - 7:24am, Oct 23
- **Visualet: Visualizing Shapelets for Time Series Classification**
🕒 7:24am - 7:32am, Oct 23

- **A Toolkit for Managing Multiple Crowdsourced Top-K Queries**
🕒 7:32am - 7:40am, Oct 23
- **Nebula: a Scalable Privacy-Preserving Machine Learning System in Ant Financial**
🕒 7:40am - 7:48am, Oct 23
- **IDEAL: IDentifying the User's IdeAL Tuple via Sorting in the Database**
🕒 7:48am - 7:56am, Oct 23
- **April: An Automatic Graph Data Management System Based on Reinforcement Learning**
🕒 7:56am - 8:04am, Oct 23
- **EasyGML: A Fully-functional and Easy-to-use Platform for Industrial Graph Machine Learning**
🕒 8:04am - 8:12am, Oct 23
- **AURORA: An Information Extraction System of Domain-specific Business Documents with Limited Data**
🕒 8:12am - 8:20am, Oct 23
- **INforE: Interactive Cross-platform Analytics for Everyone**
🕒 8:20am - 8:28am, Oct 23
- **SemFE: Facilitating ML Pipeline Development with Semantics**
🕒 8:28am - 8:36am, Oct 23
- **M-Cypher: A GQL Framework Supporting Motifs, Demonstrated by Covid-19 Knowledge Graph Analysis**
🕒 8:36am - 8:44am, Oct 23
- **UWKGM: A Modular Platform for Knowledge Graph Management**
🕒 8:44am - 8:52am, Oct 23
- **Patient Experience Modeling with Pre-trained Language Model**
🕒 8:52am - 9:00am, Oct 23
- **Inside Quasimodo: Exploring Construction and Usage of Commonsense Knowledge**
🕒 9:00am - 9:08am, Oct 23
- **Short Break**
🕒 9:08am - 9:16am, Oct 23

7:51 am

Graph neural networks II

🕒 7:51am - 9:33am, Oct 23

📍 Dublin

Research Track Long Papers

6 Subsessions

- **Fast Graph Convolution Network Based Multi-label Image Recognition via Cross-modal Fusion**
🕒 7:51am - 8:08am, Oct 23
- **Graph Few-shot Learning with Attribute Matching**
🕒 8:08am - 8:25am, Oct 23
- **TGCN: Tag Graph Convolutional Network for Tag-Aware Recommendation**
🕒 8:25am - 8:42am, Oct 23
- **Adaptive-Step Graph Meta-Learner for Few-Shot Graph Classification**

🕒 8:42am - 8:59am, Oct 23

● **Streaming Graph Neural Networks via Continual Learning**

🕒 8:59am - 9:16am, Oct 23

● **A Feature-Importance-Aware and Robust Aggregator for GCN**

🕒 9:16am - 9:33am, Oct 23

8:31am

Entity Linking, Summarization

🕒 8:31am - 10:54am, Oct 23

📍 Waterford

Research Track Short Papers

9 Subsessions

● **Securing Bloom Filters for Privacy-preserving Record Linkage**

🕒 8:31am - 8:44am, Oct 23

● **Evaluating the Impact of Knowledge Graph Context on Entity Disambiguation Models**

🕒 8:44am - 8:57am, Oct 23

● **Why is That a Background Article? A Qualitative Analysis of Relevance for News Background Linking**

🕒 8:57am - 9:10am, Oct 23

● **Schema-Agnostic Entity Matching using Pre-trained Language Models**

🕒 9:10am - 9:23am, Oct 23

● **DistilSum: Distilling the Knowledge for Extractive Summarization**

🕒 9:23am - 9:36am, Oct 23

● **Transformer Model Compression via Joint Structured Pruning and Knowledge Distillation**

🕒 9:36am - 9:49am, Oct 23

● **Enhance Prototypical Networks with Text Descriptions for Few-shot Relation Classification**

🕒 9:49am - 10:02am, Oct 23

● **Hyper-Substructure Enhanced Link Predictor**

🕒 10:02am - 10:15am, Oct 23

● **Relation Extraction with Self-determined Graph Convolutional Networks**

🕒 10:15am - 10:28am, Oct 23

Data Analytics 2

🕒 8:31am - 10:15am, Oct 23

📍 Kilkenny

Research Track Short Papers

8 Subsessions

● **Resolving Class Imbalance Problem in Financial Credit Risk Assessment via Adversarial Data Augmentation**

🕒 8:31am - 8:44am, Oct 23

● **Tolerant Markov Boundary Discovery for Feature Selection**

🕒 8:44am - 8:57am, Oct 23

- **MetaTPOT: Enhancing A Tree-based Pipeline Optimization Tool Using Meta-Learning**
🕒 8:57am - 9:10am, Oct 23
- **Leveraging User Email Actions to Improve Ad-Close Prediction**
🕒 9:10am - 9:23am, Oct 23
- **NumClaim: Investor's Fine-grained Claim Detection**
🕒 9:23am - 9:36am, Oct 23
- **Multimodal Clustering via Deep Commonness and Uniqueness Mining**
🕒 9:36am - 9:49am, Oct 23
- **Representative Negative Instance Generation for Online Ad Targeting**
🕒 9:49am - 10:02am, Oct 23
- **Few-shot Insider Threat Detection**
🕒 10:02am - 10:15am, Oct 23

8:42am

🕒 4:05pm - 4:18pm, Oct 23
- **Short Break**
🕒 4:18pm - 4:31pm, Oct 23

Recommender Systems

🕒 3:00pm - 4:42pm, Oct 23

📍 Athlone

Applied Research Track

6 Subsessions

- **Decoupled Graph Convolution Network for Inferring Substitutable and Complementary Items**
🕒 3:00pm - 3:17pm, Oct 23
- **P-Companion: A Principled Framework for Diversified Complementary Product Recommendation**
🕒 3:17pm - 3:34pm, Oct 23
- **Ranking User Attributes for Fast Candidate Selection in Recommendation Systems**
🕒 3:34pm - 3:51pm, Oct 23
- **EdgeRec: Recommender System on Edge in Mobile Taobao**
🕒 3:51pm - 4:08pm, Oct 23
- **Zero-Shot Heterogeneous Transfer Learning from Recommender Systems to Cold-Start Search Retrieval**
🕒 4:08pm - 4:25pm, Oct 23
- **GraphSAIL: Graph Structure Aware Incremental Learning for Recommender Systems**
🕒 4:25pm - 4:42pm, Oct 23

4:08pm

Fraud, cyberbullying and hate speech

🕒 4:08pm - 5:16pm, Oct 23

📍 Dublin

Research Track Long Papers

4 Subsessions

- **Towards Generalizable Deepfake Detection with Locality-aware AutoEncoder**
🕒 4:08pm - 4:25pm, Oct 23
- **Unsupervised Cyberbullying Detection via Time-Informed Gaussian Mixture Model**
🕒 4:25pm - 4:42pm, Oct 23
- **SWE2: SubWord Enriched and Significant Word Emphasized Framework for Hate Speech Detection**
🕒 4:42pm - 4:59pm, Oct 23
- **Enhancing Graph Neural Network-based Fraud Detectors against Camouflaged Fraudsters**
🕒 4:59pm - 5:16pm, Oct 23

4:25pm

Retrieval and knowledge graphs

🕒 4:25pm - 5:50pm, Oct 23

📍 Cork

Research Track Long Papers

5 Subsessions

- **News Recommendation with Topic-Enriched Knowledge Graphs**
🕒 4:25pm - 4:42pm, Oct 23

- **The Impact of Negative Triple Generation Strategies and Anomalies on Knowledge Graph Completion**
🕒 4:42pm - 4:59pm, Oct 23
- **Uncovering Semantic Bias in Neural Network Models Using a Knowledge Graph**
🕒 4:59pm - 5:16pm, Oct 23
- **Beyond 512 Tokens: Siamese Multi-depth Transformer-based Hierarchical Encoder for Long-Form Document Matching**
🕒 5:16pm - 5:33pm, Oct 23
- **Query Understanding via Intent Description Generation**
🕒 5:33pm - 5:50pm, Oct 23

4:31pm

Data Analytics 3

🕒 4:31pm - 5:49pm, Oct 23

📍 Waterford

Research Track Short Papers

6 Subsessions

- **Muse: Multi-query Event Trend Aggregation**
🕒 4:31pm - 4:44pm, Oct 23
- **Calibration of Google Trends Data**
🕒 4:44pm - 4:57pm, Oct 23
- **Estimating Topic Difficulty Using Normalized Discounted Cumulated Gain**
🕒 4:57pm - 5:10pm, Oct 23
- **Sample Optimization For Display Advertising**
🕒 5:10pm - 5:23pm, Oct 23
- **Recursive Balanced k-Subset Sum Partition for Rule-constrained Resource Allocation**
🕒 5:23pm - 5:36pm, Oct 23
- **Short Break**
🕒 5:36pm - 5:49pm, Oct 23

4:42pm

Search

🕒 4:42pm - 5:50pm, Oct 23

📍 Athlone

Applied Research Track

4 Subsessions

- **Efficient Neural Query Auto Completion**
🕒 4:42pm - 4:59pm, Oct 23
- **Learning to Rank in the Position Based Model with Bandit Feedback**
🕒 4:59pm - 5:16pm, Oct 23
- **Relevance Ranking for Realtime Tweet Search**
🕒 5:16pm - 5:33pm, Oct 23
- **DeText: A Deep Text Ranking Framework at LinkedIn**

🕒 5:33pm - 5:50pm, Oct 23

5:16pm

Machine learning topics II

🕒 5:16pm - 6:58pm, Oct 23

📍 Dublin

Research Track Long Papers

6 Subsessions

- **Neural Formatting for Spreadsheet Tables**
🕒 5:16pm - 5:33pm, Oct 23
- **Learning to Selectively Update State Neurons in Recurrent Networks**
🕒 5:33pm - 5:50pm, Oct 23
- **Towards Plausible Differentially Private ADMM Based Distributed Machine Learning**
🕒 5:50pm - 6:07pm, Oct 23
- **Semi-Supervised Max-Sum Clustering**
🕒 6:07pm - 6:24pm, Oct 23
- **A Closer Look into Task Relationship: A Topic-Wise Multi-Task Sparsity Model**
🕒 6:24pm - 6:41pm, Oct 23
- **EPNet: Learning to Exit with Flexible Multi-Branch Network**
🕒 6:41pm - 6:58pm, Oct 23

5:32pm

Posters 2

🕒 5:32pm - 7:00pm, Oct 23

📍 Sligo

Posters & Demos

11 Subsessions

- **Exploiting Class Labels to Boost Performance on Embedding-based Text Classification**
🕒 5:32pm - 5:40pm, Oct 23
- **Structured knowledge: Have we made progress? An empirical study of KB coverage over 19 years**
🕒 5:40pm - 5:48pm, Oct 23
- **Towards Inferring Queries from Simple and Partial Provenance Examples**
🕒 5:48pm - 5:56pm, Oct 23
- **Two Test Collections for Retrieval Using Named Entity Markup**
🕒 5:56pm - 6:04pm, Oct 23
- **ALEX: Active Learning based enhancement of a classification model's EXplainability**
🕒 6:04pm - 6:12pm, Oct 23
- **Deriving Geolocations in Wikipedia**
🕒 6:12pm - 6:20pm, Oct 23
- **Improving Anchor-based Explanations**
🕒 6:20pm - 6:28pm, Oct 23

- **User Taste-Aware Image Search**
🕒 6:28pm - 6:36pm, Oct 23
- **Truth be Told: Fake News Detection Using User Reactions on Reddit**
🕒 6:36pm - 6:44pm, Oct 23
- **Exploiting Common Neighbor Graph for Link Prediction**
🕒 6:44pm - 6:52pm, Oct 23
- **Ranking Multiple Choice Question Distractors using Semantically Informed Neural Networks**
🕒 6:52pm - 7:00pm, Oct 23

5:49pm

Fairness & Bias

🕒 5:49pm - 6:54pm, Oct 23

📍 Waterford

Research Track Short Papers

5 Subsessions

- **Active Query of Private Demographic Data for Learning Fair Models**
🕒 5:49pm - 6:02pm, Oct 23
- **Analysis of Multivariate Scoring Functions for Automatic Unbiased Learning to Rank**
🕒 6:02pm - 6:15pm, Oct 23
- **Denoising individual bias for a fairer binary submatrix detection**
🕒 6:15pm - 6:28pm, Oct 23
- **Joint Estimation of User And Publisher Credibility for Fake News Detection**
🕒 6:28pm - 6:41pm, Oct 23
- **Fairness-Aware Learning with Prejudice Free Representations**
🕒 6:41pm - 6:54pm, Oct 23

5:50pm

Graphs & network embeddings

🕒 5:50pm - 6:58pm, Oct 23

📍 Cork

Research Track Long Papers

4 Subsessions

- **Characteristic Functions on Graphs: Birds of a Feather, from Statistical Descriptors to Parametric Models**
🕒 5:50pm - 6:07pm, Oct 23
- **Predicting Economic Growth by Region Embedding: A Multigraph Convolutional Network Approach**
🕒 6:07pm - 6:24pm, Oct 23
- **Collective Embedding with Feature Importance: A Unified Approach for Spatiotemporal Network Embedding**
🕒 6:24pm - 6:41pm, Oct 23
- **Meta-context Aware Random Walks for Heterogeneous Network Representation Learning**
🕒 6:41pm - 6:58pm, Oct 23

Advertising II

🕒 5:50pm - 6:58pm, Oct 23

📍 Athlone

Applied Research Track

4 Subsessions

- **Learning to Create Better Ads: Generation and Ranking Approaches for Ad Creative Refinement**

🕒 5:50pm - 6:07pm, Oct 23

- **Learning to Infer User Hidden States for Online Sequential Advertising**

🕒 6:07pm - 6:24pm, Oct 23

- **Spending Money Wisely: Online Electronic Coupon Allocation based on Real-Time User Intent Detection**

🕒 6:24pm - 6:41pm, Oct 23

- **Impression Pacing for Jobs Marketplace at LinkedIn**

🕒 6:41pm - 6:58pm, Oct 23

7:00pm

Keynote Talk: Timnit Gebru

🕒 7:00pm - 8:00pm, Oct 23

📍 Dublin

Keynote talks

Lessons from Archives – Strategies for Collecting Sociocultural Data in Machine Learning

A growing body of work shows that many problems in fairness, accountability, transparency, and ethics in machine learning systems are rooted in decisions surrounding the data collection and annotation process. We argue that a new specialization should be formed within machine learning that is focused on methodologies for data collection and annotation: efforts that require institutional frameworks and procedures. Specifically for sociocultural data, parallels can be drawn from archives and libraries. Archives are the longest standing communal effort to gather human information and archive scholars have already developed the language and procedures to address and discuss many challenges pertaining to data collection such as consent, power, inclusivity, transparency, and ethics privacy. We discuss these five key approaches in document collection practices in archives that can inform data collection in sociocultural machine learning.

8:00pm

Closing session

🕒 8:00pm - 9:00pm, Oct 23

📍 Dublin

Plenary sessions
